**Technical Information**

- Control through WiFi from a mobile phone, PC, automation system or any other device supporting HTTP and/or UDP protocol.
- Microprocessor management.
- Controlled elements: 1 electrical circuits/appliances.
- Controlling elements: 1 relays.
- Shelly may be controlled by an external button/switch.

**CAUTION!** Danger of electrocution. Mounting the Device to the power grid has to be performed with caution.

**CAUTION!** Do not allow children to play with the button/switch connected the Device. Keep the Devices for remote control of Shelly (mobile phones, tablets, PCs) away from children.

**Introduction to Shelly®**

Shelly® is a family of innovative Devices, which allow remote control of electric appliances through mobile phone, PC or home automation system. Shelly® uses WiFi to connect to the devices controlling it. They can be in the same WiFi network or they can use remote access (through the Internet). Shelly® may work standalone, without being managed by a home automation controller, in the local WiFi network, as well as through a cloud service, from everywhere the User has Internet access.

Shelly® has an integrated web server, through which the User may adjust, control and monitor the Device. Shelly® has two WiFi modes - access Point (AP) and Client mode (CM). To operate in Client Mode, a WiFi router must be located within the range of the Device. Shelly® devices can communicate directly with other WiFi devices through WiFi protocol.

An API can be provided by the Manufacturer. Shelly® devices may be available for monitor and control even if the User is outside the range of the local WiFi network, as long as the WiFi router is connected to the Internet. The cloud function could be used, which is activated through the web server of the Device or through the settings in the Shelly Cloud mobile application.

The User can register and access Shelly Cloud, using either Android or iOS mobile applications, or any internet browser and the web site: https://my.Shelly.cloud/

**Installation Instructions**

**CAUTION!** Danger of electrocution. The mounting/installation of the Device should be done by a qualified person (electrician).

**CAUTION!** Danger of electrocution. Even when the Device is turned off, it is possible to have voltage across its clamps. Every change in the connection of the clamps has to be done after ensuring all local power is powered off/disconnected.

**CAUTION!** Do not connect the Device to appliances exceeding the given max load.

**CAUTION!** Connect the Device only in the way shown in these instructions. Any other method could cause damage and/or injury.

**CAUTION!** Before beginning the installation please read the accompanying documentation carefully and completely. Failure to follow recommended procedures could lead to malfunction, danger to your life or violation of the law. Allterco Robotics is not responsible for any loss or damage in case of incorrect installation or operation of this Device.

**CAUTION!** Use the Device only with power grid and appliances which comply with all applicable regulations, short circuit in the power grid or any appliance connected to the Device may damage the Device.

**RECOMMENDATION:** The Device may be connected to and may control electric circuits and appliances only if they comply with the respective standards and safety norms.

**RECOMMENDATION:** The Device may be connected to solid single-core wires with increased heat resistance to insulation not less than PVC T105°C.

**Initial Inclusion**

Before installing/mounting the Device ensure that the grid is powered off (turned down breakers).

Connect the Relay to the power grid and install it in the console behind the switch/power socket following the scheme that suits the desired purpose:

1. Connecting to the power grid with power supply 110-240V AC or 30-50V DC - fig. 1
2. Connecting to the power grid with power supply 12 V DC - fig. 2

For more information about the Bridge, please visit: http://shelly-api-docs.shelly.cloud/shelly-family-overview or contact us at: developers@shelly.cloud

You may choose if you want to use Shelly with the Shelly Cloud mobile application and Shelly Cloud service. You can also familiarize yourself with the instructions for Management and Control through the embedded Web interface.

---

**Control your home with your voice**

All Shelly devices are compatible with Amazon Echo and Google Home. Please see our step-by-step guide on: https://shelly.cloud/compatibility/Alexa https://shelly.cloud/compatibility/Assistant

**MOBILE APPLICATION FOR MANAGEMENT OF SHELLY®**

Shelly Cloud gives you opportunity to control and adjust all Shelly® Devices from anywhere in the world. You only need an internet connection and mobile application, installed on your smartphone or tablet.

To install the application please visit Google Play (Android - fig. 3) or App Store (iOS - fig. 4) and install the Shelly Cloud app.

---

**Registration**

The first time you load the Shelly Cloud mobile app, you have to create an account which can manage all your Shelly® devices.

**Forgotten Password**

In case you forget or lose your password, just enter the e-mail address you have used in your registration. You will then receive instructions to change your password.

**WARNING!** Be careful when you type your e-mail address during the registration, as it will be used in case you forget your password.

**First steps**

After registering, create your first room (or rooms), where you are going to add and use your Shelly devices.

---

**Device Inclusion**

To add a new Shelly device, install it to the power grid following the Installation Instructions included with the Device.

**Step 1**

After the installation of Shelly following the Installation Instructions and the power is turned on, Shelly will create its own WiFi Access Point (AP).

**WARNING:** In case the Device has not created its own AP WiFi network with SSID like shelly1-3SFAS58, please check if the Device is connected accordingly to the Installation Instructions. If you still do not see an active WiFi network with SSID like shelly1-3SFAS58, or you want to add the Device to another WiFi network, reset the Device. If the Device has been powered on, you have to restart by powering it off and on again. After turning the power on, you have one minute to press 5 consecutive times the button/switch connected SW. You have to hear the Relay trigger itself. After the trigger sound, Shelly should return to AP Mode. If not, please repeat or contact our customer support at: support@shelly.cloud.

**Step 2**

Choose “Add Device”.

In order to add more Devices later, use the app menu at the top right corner of the main screen and click “Add Device”. Type the name (SSID) and password for the WiFi network, to which you want to add the Device.

**Step 3**

If using iOS: you will see the following screen:

Press the home button of your iPhone/iPad/iPod. Open Settings > WiFi and add connection to the WiFi network created by Shelly, e.g. shelly1-3SFAS58.

If using Android: your phone/tablet will automatically scan and include all new Shelly Devices in the WiFi network that you are connected to.

---

Upon successful Device Inclusion to the WiFi network you will see the following pop-up:
Step 4: Approximately 30 seconds after discovery of any new Devices on the local WiFi network, a list will be displayed by default in the ‘Discovered Devices’ room.

Step 5: Enter Discovered Devices and choose the Device you want to include in your account.

Step 6: Enter a name for the Device (in the Device Name field). Choose a Room, in which the Device has to be positioned. You can choose an icon or add a picture to make it easier to recognize. Press “Save Device”.

Step 7: To enable connection to the Shelly Cloud service for remote control and monitoring of the Device, press “YES” on the following pop-up.

### Managing in Relay Mode

#### Relay Screen

In this screen you can control, monitor and change the settings for turning the power on and off. You can also see the current status of the connected appliance to Shelly. Buttons Settings, On and Off.

To control Shelly press Relay:

- To turn on the connected circuit press "Turn ON".
- To turn off the connected circuit press "Turn OFF".

Press the icon  to go to the previous menu.

#### Shelly Management Settings

Each Shelly can be configured individually. This lets you personalize each Device in a unique manner, or consistently, as you choose.

- **Power On Default State**
  - The sets the relays’ default state when powered from the grid.

  - **ON**: By default when the Device is powered and the connected circuit/appliance to it will be powered as well.
  - **OFF**: By default the Device and any connected circuit/appliance will not be powered, even when it is connected to the grid.

- **Restore Last State**: By default the Device and the connected circuit/appliance will be returned to the last state they occupied (on or off) before the last power off/shutdown.

#### Auto ON/OFF

Automatic powering/shutdown of the socket and the connected appliance.

- **Auto OFF after**: After turning off, the power supply will be automatically shut down after a predefined time (in seconds).
- **Auto ON after**: After turning off, the power supply will be automatically turned on after a predefined time (in seconds).

#### Sunrise/Sunset hours

This function requires an Internet connection. To use Internet, a Shelly Device has to be connected to a local WiFi network with a working Internet connection.

Shelly receives actual information through the Internet about the time of sunrise and sunset in your area. Shelly may turn on or off automatically at sunrise/sunset, or at a specified time before or after sunrise/sunset.

#### On/Off schedule

This function requires an Internet connection. To use Internet, a Shelly Device has to be connected to a local WiFi network with working Internet connection.

Shelly may turn on/off automatically at a predefined time.

#### The Embedded Web Interface

Even without the mobile app, Shelly can be set and controlled through a browser and WiFi connection of a mobile phone, tablet or PC.

### ABBREVIATIONS USED:

- **Shelly-ID**: the unique name of the Device. It consists of 6 or more characters. It may include numbers and letters, for example 35FA5S.
- **SSID**: the name of the WiFi network, created by the Device, for example shelly-1-35FA5S.
- **Access Point (AP)**: the mode in which the Device creates its own WiFi connection point with the respective name (SSID).
- **Client Mode (CM)**: the mode in which the Device is connected to another WiFi network.

#### Initial inclusion

**Step 1**

Install Shelly to the power grid following the schemes described above and place it into the console. After turning the power on Shelly will create its own WiFi network (AP).

**WARNING**: If you do not see an active WiFi network with SSID like shelly-1-35FA5S, reset the Device. If the Device has been powered on, you have to restart by powering it off and on again. After turning the power on, you have one minute to press 5 consecutive times the button/switch connected to SW. You have to hear the Relay trigger itself. After the trigger sound, Shelly should return to AP Mode. If not, please repeat or contact our customer support at: support@Shelly.cloud

**Step 2**

When Shelly has created an own WiFi network (own AP), with name (SSID) such as: shelly-1-35FA5S. Connect to it with your phone, tablet or PC.

**Step 3**

Type 192.168.33.1 into the address field of your browser to load the web interface of Shelly.

### General - Home Page

This is the home page of the embedded web interface. If it has been set up correctly, you will see information about:

- **Settings menu button**
- **Current state (on/off)**
- **Present time**

#### Settings – General Settings

In this menu, you can configure the Shelly device’s work and connection modes.

- **WiFi Settings** – the WiFi connection settings.
- **Access Point (AP) Mode**: allows the Device to operate as a WiFi access point. The User can change the name (SSID) and the password to access the AP. After you have entered the desired settings, press Connect.
- **WiFi Client Mode (CM)**: allows the Device to connect to an available WiFi network. In order to switch to this mode, the User must enter the name (SSID) and the password to connect to a local WiFi network. After entering the correct details, press Connect.

**WARNING**: If you have entered incorrect information (wrong settings, usernames, passwords etc.), you will not be able to connect to Shelly and you have to reset the Device.

**ATTENTION**: If you have entered incorrect information (wrong settings, usernames, passwords etc.), you will not be able to connect to Shelly and you have to reset the Device.

**WARNING**: If you do not see an active WiFi network with SSID like shelly-1-35FA5S, reset the Device. If the Device has been powered on, you have to restart by powering it off and on again. After turning the power on, you have one minute to press 5 consecutive times the button/switch connected to SW. You have to hear the Relay trigger itself. After the trigger sound, Shelly should return to AP Mode. If not, please repeat or contact our customer support at: support@Shelly.cloud

#### Login

- **Access to the Device**
- **Leave Unprotected** – removing the notification for disabled authorization.
- **Enable Authentication** – you can turn authentication on or off.

This is where you can change your username and password. You must enter a new username and the new password, then press Save to save the changes.

#### Connect to Cloud

- **Connect to Cloud**: you can turn the connection between Shelly and Shelly Cloud on or off.

#### Firmware Upgrade

- **Firmware Upgrade**: Shows present firmware version. If a newer version is available, you can update your Shelly Device by clicking Update.

#### Device Reboot

- **Device Reboot**: Reboots the Device.

---

**ABBREVIATIONS USED**

- **SSID**: the name of the WiFi network, created by the Device, for example shelly-1-35FA5S.
- **Access Point (AP)**: the mode in which the Device creates its own WiFi connection point with the respective name (SSID).
- **Client Mode (CM)**: the mode in which the Device is connected to another WiFi network.
